# Course Assignment

Introduction

For the Course Assignment for this week, we were going to continue the course assignment from last week. In this, I'll make a Gantt chart, where I will choose team members and give them all tasks. Afterwards, I'll be writing a report on the process, and my choices.

To complete my «Lofthus - frukt og saft» website, I'll need important people in the process. For this project, I'll have have to step in the role as a «project manager» and front-end developer. Then, I'll have to hire a visual designer, because we want the page to look really good. Furthermore, I'll want a member who's responsible for the ID, UI, IA and UX, becauseI want the website to be most user friendly as possible. Last but not least, I'll want a backend developer for the databases and etc for the page, and a copywriter just so we don't write anything we can't. The table below, is the themes, epics, features and user stories from last assignment.

Theme 1 - Expand the markeds, be able to sell all across the country, not only western Norway.	
Epic 1 - Free shipping all across country, if the price is larger than x.	**Epic 2:** Promote the product in ads etc all over the country.
Feature 1: Displaying the feature on the homepage, for the user to see.	**Feature 2:** Ads on the street, internet, TV etc, that will tell potential customers why they should buy their product.
User story 1: As a buyer, I want to be expected as a buyer, so that it's easier for me to buy the product.	**User story 2:** As a potential buyer, I want to find out about the product by seeing commercials

Gant chart

The picture above, shows how I chose to make the Gant Chart. There's several tasks, which shows who's in charge of what. In addition, there will be a quick description of some task underneath the chart. This chart will also be enclosed as a PDF.

The process

When I finished reading the task, I sat down to decide what member would be most valuable for the website and project. After choosing my 5 teammates, I made specific tasks to the epics I've made last week, and task regarding just building the website. Next task on the list, was making a Gantt chart showing each and every task. Because there was no place left for a description on the left bar, I chose to write a little text underneath, explaining some tasks. The gantt chart was a bit hard to do at first, since there's a lot of little details to take care of, but I managed to finish the chart.

Because of my lack of skills when it comes to the process of making websites in a company, it made the task a little bit harder. I chose superficial tasks, and I'm not sure what's important to include as a task and not. Therefore, the chart will be amateur. In

addition, I don't know how long time each task will take, so I just chose a random number of days. I gave each task a color, to represent who's in charge.

For this project, as a project manager, I would like to available for the team and for our customers at all time. I'd like to have continuous dialogue with them to help them solve problems and etc. Communication would go through a platform specified for this project.

Conclusion

The process of the making of the project is made to the best of my ability. And reflection around the process is why and how I chose to solve the tasks. All in all, not a really hard process if you know what you're doing.
